Wireline Operations

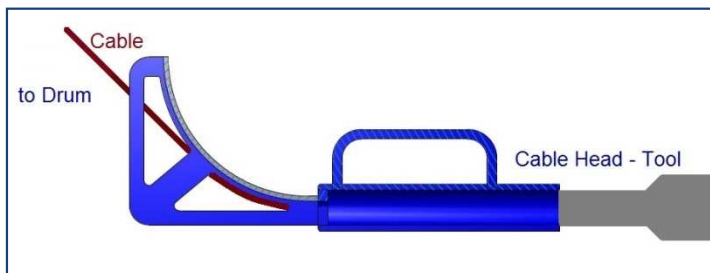

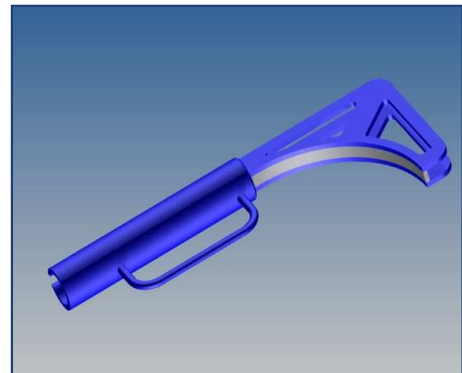

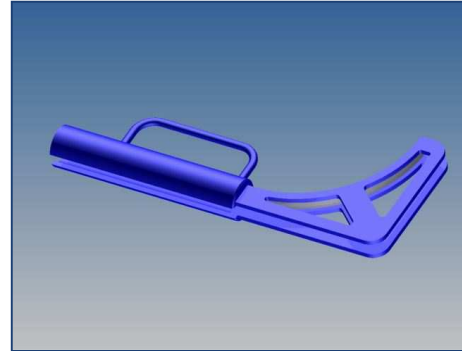

Wireline Gooseneck

Cased Hole & Open Hole

The BFGeosupply's Wireline Gooseneck is simple and solid piece of equipment, designed to limit the radius of curvature of cable attached to the cable head.

Gooseneck protects the cable and secures correct and safe bending of the cable during rig-up and rig-down.

BFGeosupply offers different types of Goosenecks depending on wireline cable size and cable head type for Cased Hole and Open Hole strings. Contact us with your exact requirements for a price quote.
